REGISTRATION NOW OPEN FOR CLARION SAFETY SYSTEMS FREE, LIVE WEBINAR ON MAXIMIZING ON-PRODUCT WARNINGS

Clarion Safety Systems will be hosting a complimentary product safety webinar – a live, online event being held in January 2024 – focusing on the latest on ANSI/ISO best practices, compliance issues, & trends

Milford, PA – December 12, 2023 – Clarion Safety Systems is hosting a live, online training event aimed at maximizing on-product warnings in early January 2024. Through its Director of Standards Compliance, Angela Lambert, the company will provide clear guidance and detailed insight related to ANSI Z535.4 and ISO 3864-2 best practices for product safety labels and instructions. Clarion Safety is at the forefront of product and workplace safety communication, leading the best practice ANSI and ISO standards in these areas for over three decades. The company designs and produces product [safety labels](#) and [facility safety signage](#) – along with offering complementary solutions and services like [safety and risk assessments](#) – to identify hazards and mitigate risks.

Enrollment is currently open for this one hour, instructor-led webinar which is designed to help participants improve safety across their product lines, and how to avoid common pitfalls. Time will also be reserved for questions and answers from the audience to address specific challenges and informational needs. The webinar takes place on January 16, 2024 from 11:00 AM – 12:00 PM ET. It's intended for safety and design engineers, product liability managers, safety professionals, and business leaders. Topics covered will include:

- The basics of product liability and the legal duty to warn
- Overview of the ANSI and ISO standards concerning warning labels
- Most recent changes to ANSI Z535.4 and ISO 3864-2 standards
- Common labeling mistakes made by manufacturers
- Next steps to take to ensure effective warnings

Of special significance is that both the ANSI Z535 and ISO 3864-2 standards were republished in 2022. This marked the first time that many of the standards in the ANSI Z535 family have been reviewed and updated in more than 10 years. Three of the six ANSI standards (Z535.1, Z535.3, and Z535.5) were republished in August 2022, and the remaining three (Z535.2, Z535.4, and Z535.6) are expected to be published shortly. While ISO 3864-2 was republished in 2022 without any changes, the previous republication in 2016 contained significant updates related to format options and symbol use.

Reducing Risk, Protecting People

The webinar will be instructed by Angela Lambert, who has over a decade of experience in product safety and liability issues. Lambert is the head of standards compliance at Clarion Safety Systems, and serves in leadership roles in the ANSI and ISO committees for product safety, workplace safety, and visual safety communication. She is the chair of ANSI Z535.1 Safety Colors, a member of the ANSI Z535 Committee, the U.S. TAG to ISO/TC 145 and of the U.S. TAG to ISO/TC 283, and is the liaison representative from ISO/TC 145 to ISO/TC 283.
